THE STORY OF "A2"

A2 Living - established in 2009 - is a minor, trendy, and up-to-date danish interior company that is for sure very different-thinking. While always being down to earth we still take pride in our own designed products, all of which comes with that little special and different detail/finish that is so often demanded - but very rarely seen.

It is exciting and well thought out items in a raw, rustic, and simple nordic design. It is solid and long-lasting products that we, A2 Living, take enormous pride putting our name to - in brief, danish design that works...

The significant - and at times quite big - products of A2 Living can be found in the most trendy shops operating within the businesses of interior, lifestyle, furniture, furnishing, arts, and flower/garden design. Stores and businesses where customers seek a very unique and different quality product, a product matching the simple and modern style of home decoration - this being both for indoor decoration and outdoor decoration in gardens, on terraces, and on balconies.

The "rustic" materials such as iron, copper, and concrete are combined with the "warm" materials such as recycled wood, cork, and rattan - and, hence, unites the expression and establishes a recurring theme throughout the entire product catalogue.

In principle, everything unnecessary is cut out, resulting in quite simple and timeless designs - all characterized by the minimalistic expression being the focal point and detail in itself.

To us, it is not enough that the design hits the nail on the head - the value in use must be unique as well!

THE "A2" LANTERN

WHY CHOOSE AN "A2 LIVING" LANTERN?

We are very grateful that our lanterns are often referred to as "the best on the market" - this is of course what we always strive to achieve and maintain in our ongoing product development.

Here are 5 reasons why we as well believe that the A2 Living lantern is one of the best on the market!

1. The sustainable angle

An A2 Living lantern is made from solid materials and is designed to be left outside in all kinds of weather all year round. Everything unnecessary has been cut out, the right materials have been chosen - and with its quality and longer lifespan, it will contribute positively to an otherwise negative trend of frequent replacement of outdoor interiors.

And why replace lanterns frequently? Every 'replacement' means an increased drain on precious resources - not to mention the footprint of the product's journey from production to the end customer. Of course, we can't guarantee that the lantern will last forever, but it will last significantly longer than the average lantern on the market - and add to that the fact that it is also possible to obtain certain spare parts for an A2 Living lantern (e.g. glass).

We dare to say that an A2 Living lantern is by far the best choice in the long run - not only financially, but also from a sustainability point of view.

2. Strong & heavy sheets

An A2 Living lantern is made of strong galvanized sheet of 0,8 mm (copper lanterns in solid copper sheet of 0,6 mm). The sheet thickness may seem insignificant, but it is one of the most important points in terms of product longevity. A thicker sheet also contributes to a much more stable & heavier product - a product that won't blow over for a good word.

3. The small details that matter

A lantern is often seen with a lack of focus on the small details - and it's this lack of attention to detail that often leads to problems down the road.

On an A2 Living lantern, the hinges, rivets and handles are made of stainless steel - so you have a lantern where everything is well thought out and every single piece of material is carefully selected. All to ensure the longest possible durability! And as a bonus - each lantern is accompanied with a microfiber cloth for cleaning of the glass.

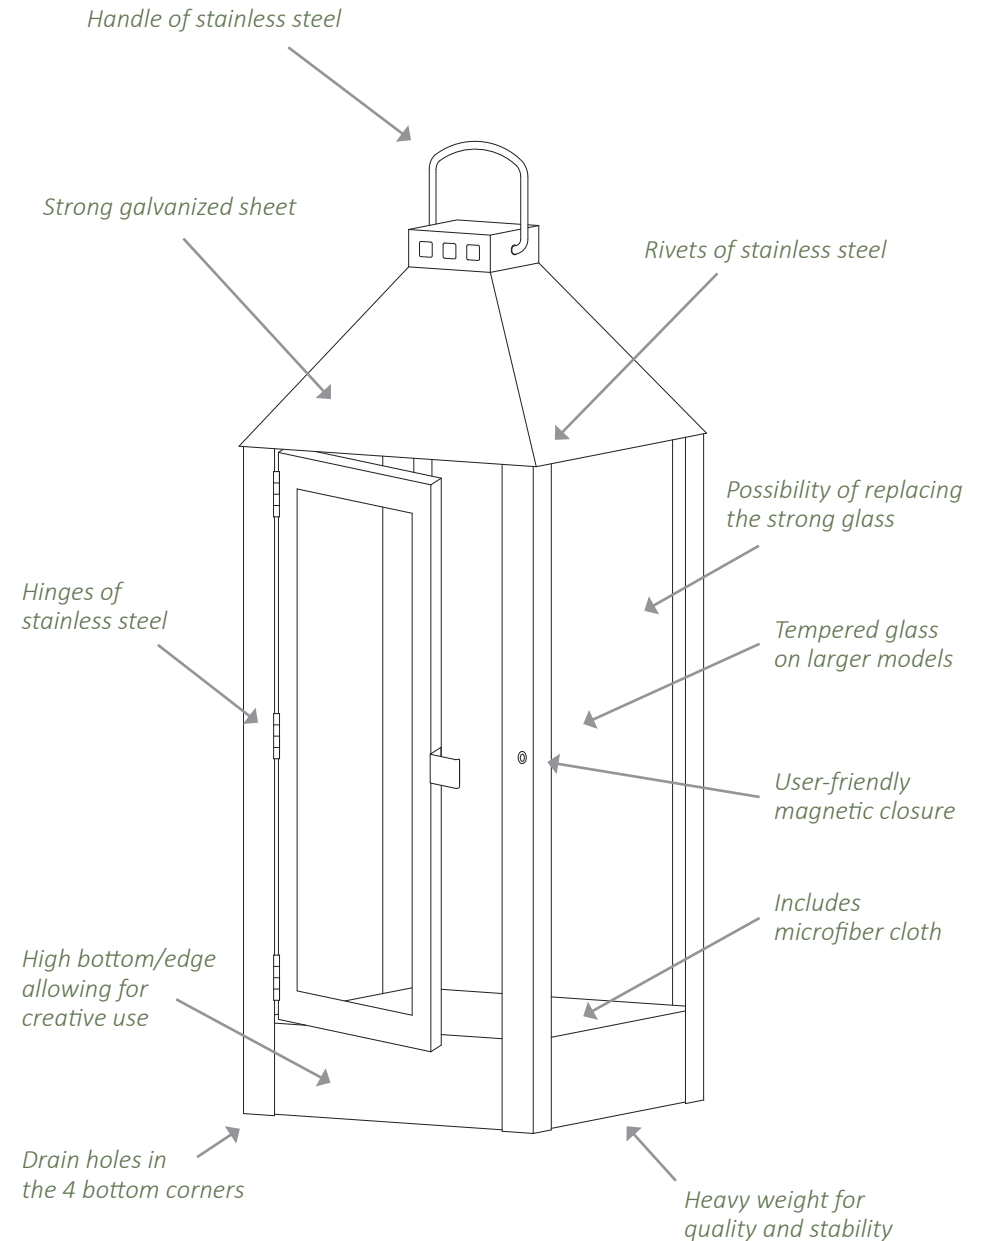

4. Focus on value in use

A classic problem with lanterns is the locks on the door - they break easily and are often difficult to "operate". The A2 Living lantern is made with the popular magnetic closure - it's durable, user-friendly and works in practice!

5. Tempered glass

Did you know that the large lanterns, where the glass sides are the largest (and therefore most exposed), are made with tempered glass? If you didn't, now you do! And again - it's the small and sometimes invisible details that ultimately create the perfect product.

THE "A2" COPPER LANTERN "THE KING" OF EXCLUSIVITY

Copper is an amazing material that, over time, gradually will patinate and get a fantastic look. Untreated, copper sheets are completely blank/shiny, which will also be the case for the lantern when it is received. As soon as it is unpacked and exposed to rain, wind, particles in the air and the like, the patination process will start and the lantern will quickly get a more rustic and exclusive look, and over time, this golden and warm colour can/will transform into the most beautiful iridescent green copper colour - the look that many searches when acquiring items in 100% solid copper. The material starts to patinate only by touch, as of why there may be signs of patination already when receiving the lantern.

Do you live in a property with copper gutters, copper mailbox, copper wall lamps, or a raised bed in copper, and are looking for a matching product, or do you just want the most exclusive, eye-catching lantern? Well, then A2 Living's copper lanterns are just what you need and simply a must-have.

A2 Living copper lanterns are made of strong sheet in 100% solid copper (0,6-0,8 mm) and with a glass thickness of 3 mm. Hinges and rivets are made of copper/stainless steel and handles are made of stainless steel. Hence, a lantern of highest quality.

Set yourself apart from the crowd – go get an A2 Living copper lantern!

THE "A2" COPPER LANTERN

FROM A 1/4-LITRE MILK CARTON TO A TRENDY HANGING LANTERN

Did you know that...

...the extremely popular A2 Living hanging lantern were designed/developed with inspiration from a 1/4-litre milk carton and the idea came to mind while enjoying a breakfast a Sunday morning?

*This perfectly illustrates how we work at A2 Living
- there's a short distance from idea to execution!*

We are always evolving and constantly looking for improvement!

THE "A2" WAX CARE TAKE GOOD CARE OF YOUR LANTERN

A2 WAX CARE is a Danish handmade natural care product consisting of jojoba oil, lanolin and beeswax.

By focusing on products with a long lifespan, other and external issues often arise throughout the years. To us, with a strong focus on sustainability and the creation of products with the longest possible lifespan, it would be a real shame if a product were to be discarded simply because external factors make it look shabby.

Do you live in a coastal area? If so, you may be particularly exposed to airborne particles that often settle on surfaces and force a whitish, dull and worn look? If not particles, then over the years the sun and its UV rays might also affect the appearance.

However, without care and maintenance, this will happen in most places - it's just a matter of time.

The problem with this? It's easily confused with a worn product.

Issues with particles on the surface or a surface affected by the sun can be solved by using A2 Wax Care - a product you can add to almost any surface to increase the lifespan, activate faded colors, and add a water-proofing effect.

The result?

Your product will look almost like new. No need to replace your product just yet – money and resources saved, that's sustainable!

You probably won't find it any bigger

The biggest we've got, the biggest we've seen. The A2 Living Mammut lantern is perfectly functional as e.g. a mobile greenhouse on the terrace - as it fits 2 x standard capillary boxes it can easily be used when planting/growing tomatoes, cucumbers, herbs, spices, etc.

Can also be used on the terrace, in the patio/courtyard, and in the restaurant for both decoration, storage and multiple other scenarios - alternatively you can use it as an eye catcher in front of the store, perhaps accompanied by the large A2 Living Mammut Pillar Candles or just keeping it simple with a delicious olive or citrus tree?

Only your imagination sets the limit!

As for the other well-known galvanized A2 Living all-year lanterns, the Mammut lantern comes with a user-friendly magnetic closure. It is made of strong galvanized sheet (an extra thick sheet of 2 mm is used for this mammut-version) and the glass (tempered glass) has a thickness of 5 mm. Hinges, rivets, and handles are made of stainless steel.

THE "A2" PILLAR CANDLE

THE STORY OF THE "A2" BIRDHOUSE

Inspired by the well-known A2 Living lantern - with its simple, minimalistic, and rustic design - the birdhouse and bird feeders are as well produced in solid materials and are designed to be able to stand/hang outside in all kinds of weather all year round.

The nestbox is made of recycled wood from recycled pallet frames - these are acquired, sawn into useful pieces/lengths, and finally secured a 'new life' - both for the wood itself, but just as much for one or more of the gardens 'lucky birds'. As the wood has already lived a past life full of history, each birdhouse is unique. There could be cracks, logos, paper clips, or handwriting on the wood - all of which just adds further to the unique and rustic look that we, at A2 Living, so happily seek to obtain.

Birds deserve great design too, right?

THE STORY OF THE "A2" GREENHOUSE

Fancy a mobile greenhouse in the same great quality as the well-known A2 Living lanterns?

The A2 Living greenhouse comes with a simple, minimalistic, and rustic design. It is made of solid materials (strong galvanized sheet of 0,8 mm, tempered glass and rivets/handles in stainless steel) and is designed to be able to stand outside in all kinds of weather all year round and will, due to it's high quality and long-lasting materials, contribute positively to an otherwise negative trend of frequently replacing outdoor interior.

The greenhouse is designed without bottom. This makes it usable on top of already established/planted flowers, herbs, or other plants - this also makes it easy to do watering/caring under the greenhouse.

Perfect for use in the kitchen garden to protect or pre-sprout your favourite plants?

But do not worry - if needed, bottom trays designed to match the greenhouse are available.

An extra bonus? Each greenhouse comes with a microfiber cloth for cleaning of the glass.

THE "A2"
CL RATTAN BASKET
& BOWL

THE STORY OF THE "A2" RATTAN PRODUCTS

What is rattan?

Rattan is a fast-growing grass/plant that, given the right weather conditions, can reproduce within 5-7 years after being harvested. Rattan is characterized by being extremely strong, durable, and flexible; characteristics that are mainly due to the solid stems of the rattan. Based on this, rattan is an amazing material for the baskets, bowls, trays and fences produced by A2 Living.

Additionally, rattan is a great contributor to the environment of the large rainforests and to the CO2 assimilation in e.g., Indonesia. The plant is growing from the forest floor and from here it is beautifully twisting its way up the other vegetation of the forest. There is no such thing as a machine for harvesting rattan; completely in line with all our products being handwoven, the rattan plant is also harvested by hand.

Products in CL rattan

All our products in this category are produced using the incredibly strong CL Rattan, considered by us to be the best choice in terms of quality, durability and design.

The products are handwoven (and thus not machine-made) with strong and solid stems of CL rattan, and by only using thicker stems, an optimal abrasiveness and durability of the products are ensured. Due to great variation in the appearance of rattan stems, and by including a mix of both darker, brighter, and spotted stems, a natural look is achieved, and no two baskets will be 100% alike.

Measurements may vary slightly as rattan is a living material and, over time, products will turn more silvery/greyish due to the impact of the sun/nature. That's exactly what we love about natural products!

An extra bonus?

Each A2 Living rattan basket or bowl is accompanied with a strong and transparent plant bag for planting.

WHY CHOOSE A RATTAN PRODUCT FROM A2 LIVING?

THE "A2" KUBU GREY RATTAN PRODUCTS

All our products in this category are produced using Kubu Grey Rattan. Using a different variety of rattan (compared to CL Rattan), a completely different look is obtained on these products. That's the beauty of working with natural materials!

Kubu Grey rattan is as well characterized by being extremely strong, durable, and flexible; characteristics that are mainly due to the solid stems of the rattan – and all our products are handwoven!

Kubu Grey Rattan is a bit thinner and softer than CL Rattan (which is used in our other series of rattan products) and, hence, these products are very suitable for indoor use. They can easily be used outdoor as well and fully fits the purpose; however, due to thickness difference in stems, durability might be a bit shorter compared to products from our other series in CL Rattan.

THE "A2" FLOWER POT, VASE, FLOWER BUCKET & TRAY

NO! Quality products don't always have to be among the most expensive...

This is a fantastic series of flower pots, vases, flower buckets & trays from A2 Living. To a great extent, the series follows the amazing colors also available in the series of lanterns from A2 Living. The items are perfect for both plants, herbs, storage, decoration, and much more - and they can be used both indoor and outdoor!

What makes them special? All products (except copper – made of pre-patinated 0,32 mm solid copper sheet) are made of 0,32-0,38 mm galvanized sheet – this also applies to the colored versions (these are simply powder coated on top of the galvanized sheet to ensure the same great quality). The icing on the cake? All items are applied with silicone on the inside for optimal protection/impermeability.

Now simply enjoy reviewing these budget-friendly products in a fantastic quality!

THE "A2" METAL WIRE BASKET & TRAY

Looking for simple, rustic, and exclusive storage items?

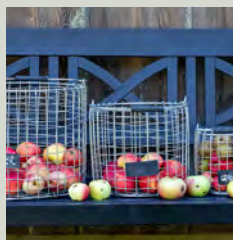

Wire baskets and wire trays from A2 Living are made of iron and comes in 3 different colors: black powder coated, olive green powder coated or lacquered in a galvanized look – to ensure optimal durability, lacquering/powder coating is repeated multiple times.

The black & olive green version comes with exclusive leather handles and the version in galvanized look comes with handles & labels in black rubber.

The best part? The baskets & trays can be used both indoor and outdoor for decoration, storage, etc.

Feel free to start imagining the joy of using these on the patio, in the outdoor kitchen, in the children's room, in the shop, in the bathroom, as storage boxes in the shelf in the office or anywhere you like!

THE STORY OF THE "A2" RECYCLED WOOD ITEMS

Boxes, shelves, and signs from A2 Living are made of recycled wood from recycled pallet frames - these are acquired, sawn into useful pieces/lengths, and finally secured a 'new life' - both for the wood itself, but just as much on the terrace, in the garden, in the living room, in the restaurant, in the café, or wherever the furniture is put in use.

As the wood has already lived a past life full of history, each piece of furniture is unique. There could be cracks, logos, paper clips, or handwriting on the wood - all of which just adds further to the unique and rustic look that we, at A2 Living, so happily seek to obtain.

The furniture is produced/assembled in A2 Living's own workshop at our own premises in Hem/Skive (Denmark).

THE "A2" GALVANIZED GARDEN FURNITURE

Tired of bringing your garden furniture inside during the winter?

Tables, stools, and benches from A2 Living are produced in hot galvanized iron and are designed to be able to stand outside in all kinds of weather all year round. The concrete tiles on tables are of similar quality as what is used in Denmark when constructing sidewalks, thereby ensuring a quality that is resistant to both stains and wind/weather (e.g. exposure to the sun or freezing temperatures during winter).

A galvanized table, stool, or bench from A2 Living is probably the closest you will get to a maintenance-free piece of furniture!

It's much better to spend your time having fun!

DANISH DESIGN

A2 LIVING - EXCLUSIVE INDOOR & OUTDOOR INTERIOR BY OWN DESIGN

A2 Living - established in 2009 - is a minor, trendy, and up-to-date danish interiour company that is for sure very different-thinking. While always being down to earth we still take pride in our own designed products, all of which comes with that little special and different detail/finish that is so often demanded - but very rarely seen.

It is exciting and well thought out items in a raw, rustic, and simple nordic design. It is solid and long-lasting products that we, A2 Living, take enormous pride putting our name to - in brief, danish design that works...

The significant - and at times quite big - products of A2 Living can be found in the most trendy shops operating within the businesses of interior, lifestyle, furniture, furnishing, arts, and flower/garden design. Stores and businesses where customers seek a very unique and different quality product, a product matching the simple and modern style of home decoration - this being both for indoor decoration and outdoor decoration in gardens, on terraces, and on balconies.

The "rustic" materials such as iron, copper, and concrete are combined with the "warm" materials such as recycled wood, cork, and rattan - and, hence, unites the expression and establishes a recurring theme throughout the entire product catalogue.

In principle, everything unnecessary is cut out, resulting in quite simple and timeless designs - all characterized by the minimalistic expression being the focal point and detail in itself.

To us, it is not enough that the design hits the nail on the head - the value in use must be unique as well!
